# **Section E: Real-World Applications (8 marks)**

Apply ratio and proportion to these practical problems:

33. <b>Recipe Problem</b> : A recipe for 4 people needs 300g flour, 200g sugar, and 150g butter.			
• How much of each ingredient is needed for 6 people?			
Flour: g Sugar: g Butter: g			
34. <b>Paint Mixing</b> : Red and blue paint are mixed in the ratio 3 : 2 to make purple paint.			
<ul><li> How much red paint is needed if 8 litres of blue paint is used?</li><li> How much purple paint will be made in total?</li></ul>			
Red paint: litres Total purple paint: litres			
35. <b>School Ratio</b> : In a school, the ratio of boys to girls is 4 : 5. There are 720 students in total.			
<ul><li> How many boys are there?</li><li> How many girls are there?</li></ul>

#### **Key Methods to Remember**

- Simplifying ratios: Divide all parts by their highest common factor
- Sharing in ratios: Find total parts, then calculate each share
- **Direct proportion:** If one quantity increases, the other increases proportionally
- Unitary method: Find the value of one unit, then multiply
